

Oscar Marrero Engström

This week was our first sprint. We started out by attending the supervision session and having a very productive conversation with our supervisor. We received some great advice regarding our setup in Trello, especially when it comes to our user stories and acceptance criteria.

Next, we had our sprint planning, which was mostly spent developing our user stories, deriving specific tasks that can be completed for each user story and assigning specific acceptance criteria for each one. We also devised a weekly schedule that assigns the role of product owner to one of our team members. We thought this would be especially beneficial when it comes to prioritizing the different stories in our backlog.

Personally, I spent most of this sprint trying to get a better grasp of html, CSS and bootstrap. All of these will be heavily used in our project and I think it is important to have a basic understanding of them. We also had some great teamwork regarding sharing knowledge. The more experienced team members in the scope of our project shared some great visualizations of how our client-server setup will look and also shed some light on how these aforementioned tools will be used to support this setup.

I think I am becoming more and more familiar with the different concepts of scrum, but I think it will be key to keep attending the supervision sessions each week to receive feedback on how these are being applied by our team. For the next sprint I am looking forward to doing a better job at estimating the effort necessary to complete each task, since I think we have been lacking a little bit in that regard. I will also try to remind my team members of this.
